Digitec

Providing **software solutions** and developing radiological image processing **since 1985**

presents

TIRESYA

Tiresya is **our intelligence, our innovative approach** to radiology. It is the pulsing heart of our software solutions. Tiresya represents our **expertise, knowledge** and our **outlook** on the

future. It holds our know-how, our experience in the field, as well as the most innovative features in digital radiology and the most sophisticated **AI algorithms**.

Tiresya is the core of our products

ERACLE

TESEO

ARGO

KADMO

ODIS

DIGITAL FLUOROSCOPY ACQUISITION SOFTWARE FOR C-ARM

Multifaceted, ingenious, expert archer: with any type of bow our Odis remains foolproof thanks to his great capacities.

Digital fluoroscopy acquisition software for C-Arm

Intended use:

C-ARM

The advantages of all time

WORKSTATION CONSOLE

We supply medical and consumer PCs already configured with our software. We prioritize Windows 10 LTSC, Cybersecurity and GDPR

MULTI DETECTOR SYSTEM

Compatible with over thirty static and dynamic detectors on the market

X-RAY DEVICES INTEGRATION

Generators, accessories and 3rd party systems

SMART USABILITY

User-friendly interface, touch oriented, multi resolution format, multi language support, customizable UI

DICOM 3.0 COMPLIANCE

Store, Print, Worklist, MPPS, CD/DVD/USB, Dose SR, Query/Retrieve, Storage Commitment

PROPRIETARY ADVANCED PROCESSING ALGORITHMS FOR IMAGE QUALITY

Anatomical Artificial Intelligence, Super Zoom, DSA, LVA, Wall motion

Our strength is in detail

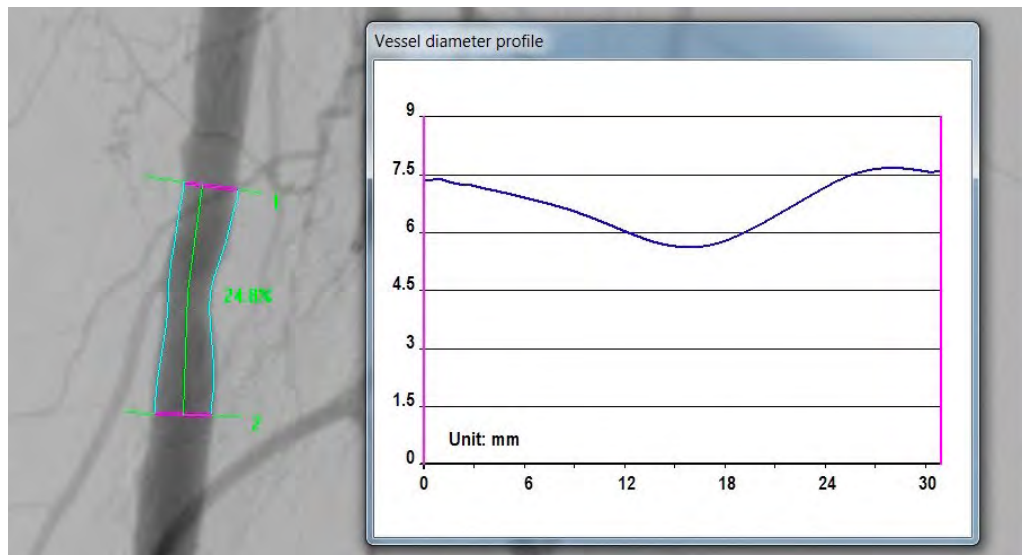

DSA

Digital subtraction angiography

QA

Quantitative analysis

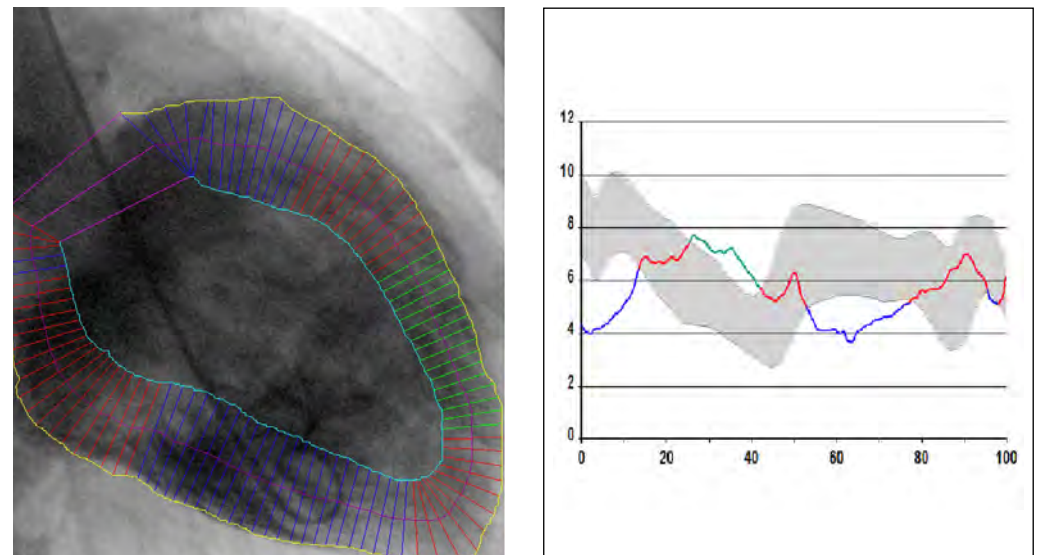

LVA

Left ventricular analysis

WALL MOTION

Intelligent algorithms

ANATOMICAL ARTIFICIAL INTELLIGENCE

Classifies image regions into anatomical parts, shutters, direct irradiations and metal objects

Anatomical R-evolution

AI improves image quality through automatic anatomical area recognition

Anatomical W/L

AI evolves fixed preset ROI into anatomical ROI

Anatomical ABC

AI dynamically optimizes exposition parameters detecting and excluding metal objects

Anatomical Exposure Index

AI improves the detector dose estimation within the anatomical region (excluding shutters, direct irradiations and metal objects)

SUPER ZOOM

AI increases the sharpness of the details within the zoomed image area

TIRESYA is a concept, a work method, a philosophy.
What does this mean in real terms?

- A single interface for all Digitec software
- User-friendly interface
- Touch-oriented mode
- High quality images
- Automatic image processing
- Easy reading of the images
- Reduced radiation dose for the patient
- Easier diagnoses

Tiresya is the **core** of our **products**

All of Tiresya's properties and functions are applied across the entire range of our products, thus extending our know-how to all the application sectors in which we operate: human, dental and veterinary.
